## **SEWING GARMENTS**

*An industrial sewing machine is required for this method of construction. We recommend a walking foot machine such as Seiko LSW-8BL. The timing should be adjusted to help the latex through the machine better, feeding the pattern pieces through with light tracing paper placed underneath, which will make the task a lot easier. A constant tapping of the machine pedal as opposed to a constant stream feed, will allow better overall control and give a better finish*

*Although our Sheeting has excellent tear resistance we strongly advise that you seal seams with the application of a glue strip (recommended at 2 cm width) to the back of the seam.*

*Unfortunately we are unable to recommend thread or needles.*
